Find all historical information quickly and easily using...

The only purpose built turnkey historical search solution for Australian enterprises enabling easy access to legacy data and decommissioning of associated application systems

The IPLATINUM data archival solution, ***iArchive*** helps with the decommissioning of legacy systems (Finance, HRP, Property & Rating, Records, Assets and more) while allowing organisations to store historical data independent of application technology. This provides a mechanism to query and report on this data without the need for an application to support it.

This proven and demonstrable approach allows access to historical data using industry standard reporting tools and is adjusted to satisfy query requirements based on the use of standard ***iArchive*** queries.

iArchive ensures valuable historical information is far more accessible to all employees, ensuring they are making the best-informed decisions by having a complete view of information at their fingertips.

Users can find and view information without having knowledge of or access to the various historical applications, meaning that important information is being used and training in applications is reduced across the whole organisation.

Information can be easily accessed in a structured or unstructured format depending on the nature of the inquiry and the source of the data. This enables simple parameter based searches along with "google like" inq**ui**res.

iArchive is helping every user across the organisation gain better access to historical information ensuring they are well informed and equipped to carry out their day-to-day activities. Most importantly, it improves access to information whilst reducing the need to maintain expensive redundant application systems.

Organisations spend excessive amounts of money maintaining systems that are old, cumbersome and largely redundant. Imagine the benefits if the valuable historical information that resides within these systems could easily be accessed without the need to maintain the expensive applications technology..."

Let iArchive make historical information access easy!

iArchive Features

- Unlocks historical information locked away in old systems and processes
- Single point of access to all historical information
- Allows the decommissioning of old ERP systems
- Reduces costs by reducing the number of maintained systems
- Preserves application security details
- Supports structured reporting and unstructured google like searches (where available)
- Reduces data migration costs

Now installed in over 70 organisations
